PROFESSIONAL SUMMARY

Node.js Developer with 4 years of experience building production backend services and REST/GraphQL APIs using Node.js, Express.js, Next.js, JavaScript (ES6+), and TypeScript. Strong command of Node.js internals (event loop, non-blocking I/O, async/await, streams) and Express routing with custom middleware for authentication, validation, logging, and error handling. Built data retrieval, authentication, and transaction logging APIs in healthcare and financial services, and modernized legacy applications by mapping legacy server-side and jQuery code into clean Node.js services. Hands-on with AWS serverless (Lambda, API Gateway, DynamoDB), the Elastic Stack (Elasticsearch, Logstash, Kibana) for observability, and Docker/Kubernetes CI/CD. AI-forward, strong debugger, and clear communicator.

TECHNICAL SKILLS

- **Core Node.js Skills:** Node.js, Express.js, JavaScript (ES6+) / TypeScript, Event Loop & Asynchronous Programming, Promises, Async/Await, REST API Development, GraphQL (Apollo Server), Middleware & Routing (Express Router), Custom Middleware, Authentication / Authorization Middleware, Error Handling & API Validation (Joi / Zod), Microservices Architecture
- **Testing:** Mocha, Chai, Supertest, Jest, Cypress, Unit Testing, Integration / API Testing, TDD
- **AWS / Serverless:** AWS Lambda, API Gateway, DynamoDB, S3, CloudWatch, IAM, Serverless Architecture, Serverless Framework
- **Node.js Internals & Libraries:** Streams, Buffers, EventEmitter, Worker Threads, Cluster Module, Next.js (API Routes, SSR/SSG), Axios, Mongoose, Sequelize, Helmet, CORS, Passport.js, jsonwebtoken
- **API Standards:** OpenAPI/Swagger, Postman, API Versioning, Pagination, Rate Limiting, Caching, Backend-for-Frontend (BFF)
- **Authentication & Security:** OAuth 2.0, OpenID Connect (OIDC), JWT, RBAC, SSO (Azure AD), Token Validation, Secure Headers
- **Databases:** PostgreSQL, Oracle Database, MongoDB, SQL Server, DynamoDB, Elasticsearch, Query Optimization, Connection Pooling
- **Logging & Observability:** Elastic Stack (Elasticsearch, Logstash, Kibana), Transaction / Audit Logging, Winston, Morgan, Request Tracing, Health Checks, CloudWatch
- **Legacy Modernization:** Legacy Code Analysis (Perl, jQuery, server-side code), Incremental Rewrites, Refactoring, API Contract Design
- **AI-Enabled Development:** GitHub Copilot, Claude, AI-Assisted Refactoring, Test Generation, Code Review, LLM Integration
- **Other:** SQL, HTML5, CSS3, React, jQuery, Docker, Kubernetes, OCI, Azure, CI/CD (Jenkins, Azure DevOps), Git, npm, PM2, ESLint, SonarQube, Agile / Scrum

PROFESSIONAL EXPERIENCE

Oracle Health, KS

Node.JS Engineer ***Oct 2025 – Present***

- Design, build, and own production Node.js and TypeScript backend services and REST/GraphQL APIs for Oracle Health's cloud healthcare platform, powering clinical and patient-facing applications.
- Led migration of legacy server-side endpoints into Node.js/Express services through incremental rewrites, mapping business rules and keeping existing consumers running with zero downtime.
- Split a tightly coupled monolithic service into microservices with modular Express Router routes and controller/service layers, making each service independently testable and deployable.
- Authored a shared library of custom Express middleware (Zod validation, correlation IDs, request logging, rate limiting, centralized error handling) reused across 10+ services.

- Built authentication and authorization middleware validating OAuth 2.0 / OIDC JWT tokens and enforcing fine-grained RBAC on every protected route handling patient data.
- Designed a GraphQL API with Apollo Server (schemas, resolvers, DataLoader batching) over existing REST services, reducing front-end round trips and eliminating N+1 queries.
- Built TypeScript REST endpoints for clinical data retrieval, document submission, and approval workflows with versioned OpenAPI/Swagger contracts used by partner teams.
- Built Node.js integration services in front of internal AI/LLM APIs with retries, timeouts, and circuit breaking, streaming results in real time via Server-Sent Events.
- Diagnosed and fixed event loop blocking by moving CPU-heavy work to worker threads and streaming large exports, keeping p95 latency stable under peak load.
- Implemented transaction and audit logging with Winston, shipping structured logs via Logstash to Elasticsearch with Kibana dashboards and alerts that cut incident root-cause time.
- Reduced API response times by about 40% through caching, parallel calls with Promise.all, connection pooling, and tuned SQL indexes in Oracle and PostgreSQL.
- Owned production debugging across API and database layers using logs, traces, and the Node.js inspector.
- Raised API test coverage to 85%+ writing unit and integration/API tests with Mocha and Chai (plus Supertest), gating every merge in CI.
- Championed AI-assisted development with GitHub Copilot and Claude for code comprehension, test generation, and refactoring, using a review-first workflow for all AI output.
- Shipped services via Docker, Kubernetes, OCI, and CI/CD; mentored peers through code reviews in Agile/Scrum.

EY Global Delivery Services, India

Software Engineer ***Aug 2022 – Dec 2023***

- Developed Node.js backend services for EY Tax and Assurance audit, reporting, and compliance platforms.
- Built Express BFF and microservices REST APIs aggregating data from multiple internal systems for Next.js applications.
- Modernized legacy reporting modules by documenting business rules in legacy server-side and jQuery code and incrementally rewriting them as Node.js APIs.
- Organized APIs with Express Router, versioned routes (/v1, /v2), and route-level validation middleware.
- Developed serverless Node.js APIs on AWS Lambda and API Gateway with DynamoDB for client engagements hosted on AWS, deployed with the Serverless Framework.
- Designed data-intensive REST endpoints with filtering, sorting, and pagination over PostgreSQL and SQL Server, optimized with caching and pooling.
- Implemented SSO (Azure AD, OAuth 2.0, OIDC, JWT) with Express authentication and authorization middleware.
- Built Next.js API routes and set up transaction logging and centralized error handling in Express services.
- Wrote unit and integration/API tests with Mocha and Chai (plus Supertest) and E2E tests with Cypress; deployed via Jenkins and Azure DevOps.

Pfizer, India

Software Developer ***May 2021 – Jul 2022***

- Developed Node.js services and APIs for clinical research data management using JavaScript (ES6+) and TypeScript.
- Built serverless Node.js functions on AWS Lambda and API Gateway with DynamoDB and S3, monitored in CloudWatch.
- Migrated legacy jQuery pages to call new Node.js APIs and queried PostgreSQL and MongoDB for clinical data retrieval.
- Implemented OAuth 2.0/JWT auth with RBAC and wrote unit tests with Mocha and Chai.

EDUCATION

Masters in computer science- University of Central Missouri
Bachelors in computer science- GITAM University
